

EDAP

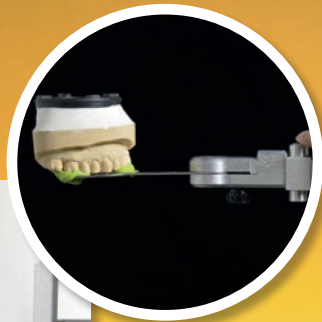

AMBARINO® **High Class** – High-Performance Material – enthusiastic in functionality and aesthetics.

Indications: Crown, bridge, inlay, onlay, veneer, tabletop
Color: BL2, BL3,5, B1, C2, D2, A1, A2, A3

creamed

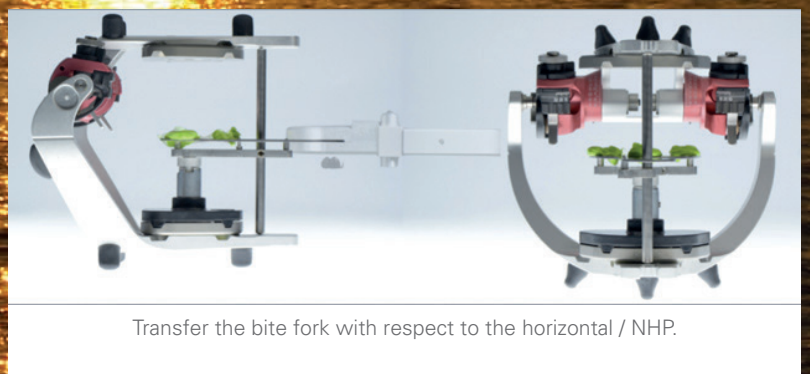

EDAP - Esthetic Dental Axis Planning

Bite always on the horizontal plane.

Verification of the central axis in the articulator, based on the raphe median (Case Study).

Transfer the bite fork with respect to the horizontal / NHP.

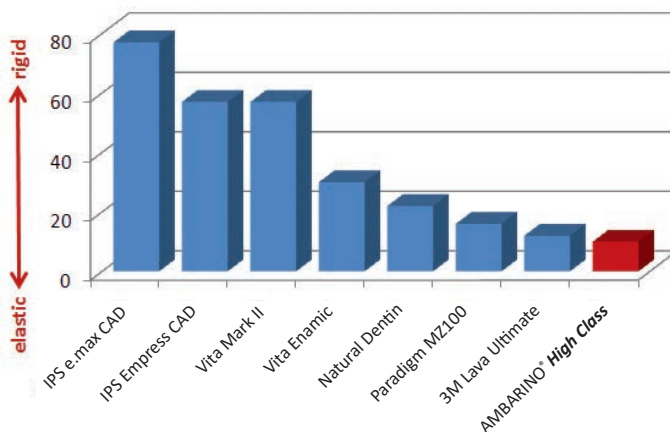

Ask for our video.

AMBARINO® *High Class* is the Most Elastic Ceramic

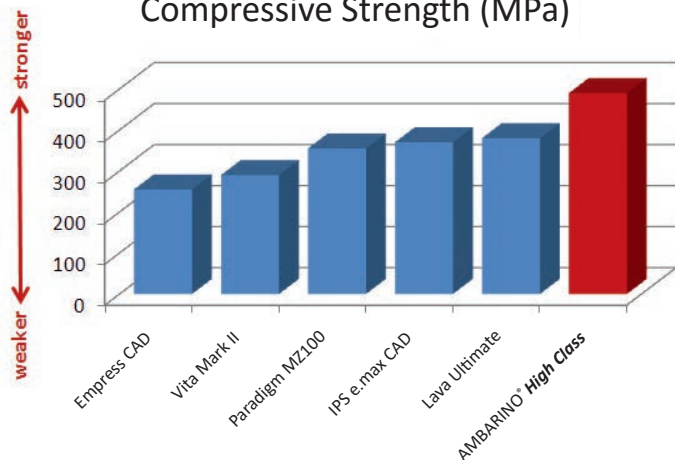

AMBARINO® *High Class* is the most elastic ceramic material available on the market. Elasticity allows the material to flex while chewing or under pressure, which will minimize chips and fractures.

Elasticity is especially important for implant dentistry where the lack of a periodontal ligament leaves the patient with no sensation and natural shock absorption.

Modulus of Elasticity (GPa)

Compressive Strength (MPa)

AMBARINO® *High Class* is the Strongest Composite

Compressive strength simulates chewing forces, and AMBARINO® *High Class* is the strongest material among composites and traditional ceramics.

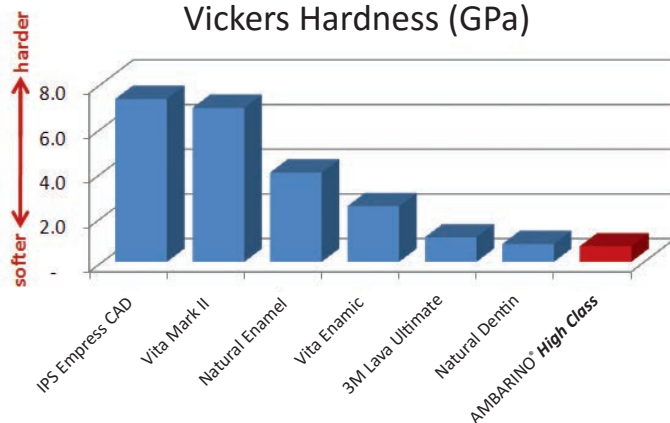

Compressive strength is measured by simultaneously applying force to both the bottom and top of the material and determining how a restoration will perform under shear and tensile forces.

AMBARINO® *High Class* is the Least "Clacky" Ceramic

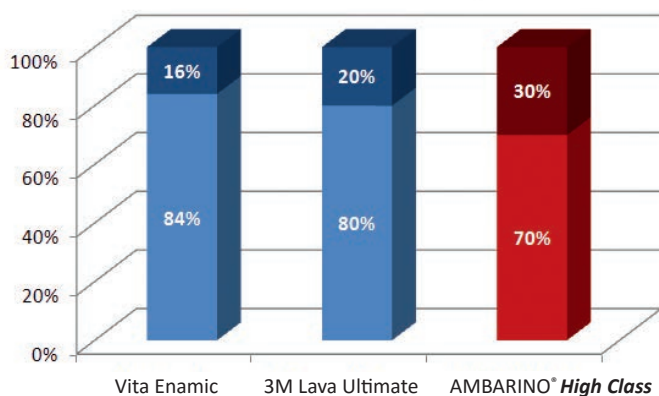

AMBARINO® *High Class* is the gentlest of all of dental ceramics and ceramic hybrids, offering a Vickers hardness which most closely matches natural dentin.

By comparison, non-hybrid ceramics are harder than enamel, making them less pliable and forgiving and causing an unnatural "clacky" sound when the patient bites down.

Vickers Hardness (GPa)

Ratio of Ceramics & Polymer

AMBARINO® *High Class* has the Highest Polymer Ratio

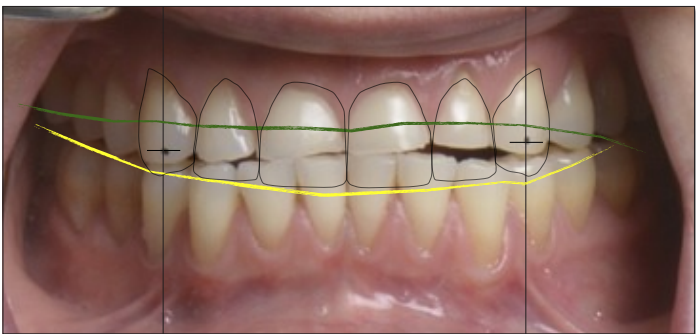

The key to achieving the exceptional flexibility, compressive strength, and lack of brittleness is the ratio of polymers to ceramics in the material.

AMBARINO® *High Class* is formulated with a higher ratio of polymers to ceramics, making it the most durable and elastic ceramic hybrid on the market today.

Non-Invasive supplies with Live demo:

With Dr. Frank Schütz in Würzburg

NON-INVASIVE SUPPLY WITH AMBARINO® *High Class*

Design

1

2

Milling

Individualize the milled AMBARINO® *High Class* supply:

Step 1: Condition with AMBARINO® *CFI Bond*

3

Step 2: Functional and aesthetic optimization with AMBARINO® *Stains* or AMBARINO® *Veneering*

4

Insert the NON-INVASIVE AMBARINO® *High Class* restoration:
Prepared:

Step 1: AMBARINO® *High Class* with AMBARINO® *CFI Bond* condition

Step 2: The procedure takes in the adhesive way with AMBARINO® *Bond*

Step 3: Insert the non-invasive AMBARINO® *High Class* restoration with AMBARINO® *Hard Flow*

Red aesthetics with milled AMBARINO® *High Class* restoration

AMBARINO® *Gingiva Flow*

AMBARINO® *Gingiva Paste*
